## Keep this guide for future reference

This information is designed to help suitably qualified personnel install and operate Mechan Safety equipment. Before using this product, read this guide thoroughly along with any relevant European and/or National standards e.g. Machinery Directive 2006/42/EC and it's amendments, Provision and Use of Work Equipment Regulations.

Further information can be obtained from Mechan Controls

## Description

Mechan HE safety switches are magnetically coded, solid state non-contact safety switches for use in machine guarding applications.

Non-contact operation makes the HE switches easy to install and tolerant to misalignment. The solid state design is even more tolerant to shock and vibration, and provides single point switching which makes for a simpler and more reliable machine guard interlock.

The additional security of the coded magnetic operation along with fully sealed IP67 rating make these switches ideal for use in wet or dusty and harsh environments.

The HE safety switches have been designed to connect to the SCU-1 Safety Control Unit. When installed correctly, up to 30 switches can be installed in series.

## Operation

The HE safety switch has $2 \times \mathrm{N} / \mathrm{O}+1 \mathrm{~N} / \mathrm{C}$ bi-directional solid state outputs along with built in LED(s) for indication. When installed on a machine guard, power is applied, and the switch and actuator are within the specified operating range, the N/O Outputs will be closed, the N/C Output will be open. When the actuator moves out of the operating range, the N/O Outputs will open, the N/C Output will close. (See page 3 for LED Indication.)

The HE safety switch and actuator have an 7 mm switching distance and can approach each other from most angles. When the switch is closed the targets on the printed face of the switch must be aligned.

To avoid physical damage, do not use the switch and actuator as a stop, leave a $1-2 \mathrm{~mm}$ gap for best operation and tolerance to machine guard vibration.

## Applications

Interlocked guards where additional security required. Door locking is not required.
Harsh environments where vibration, water or dust are problems.
Food and Beverage packing/filling systems
Dairy Pharmaceutical Paper Industry
Can Forming and Filling, (Aluminium, Steel, Plastic)
Semi conductor Manufacture/Assembly.

## Declaration of Conformity

See back page for declaration of conformity.

SAFETY CONTROL UNIT

Mounting on 35 mm DIN Rail

Removal from 35 mm DIN Rail

The control modules are designed to be mounted in an IP55 (minimum) control cabinet.

The modules clip on to standard 35 mm symmetric DIN-Rail

To remove the modules, gently lever out the DIN clip with a small screwdriver as shown (1).

Tilt the unit in the direction (2) and slip the unit off the DIN Rail

Indication

| POWER |  |
| :---: | :---: |
| When power is | $\otimes \otimes \otimes$ |
| connected, the red |  |
| LED will be | $\otimes \otimes \otimes \otimes$ |
| illuminated |  |
| OUTPUT |  |
| When K1 \& K2 are |  |
| uminated green, | $\square$ |
| he outputs 13/14 |  |
| \& $23 / 24$ will be | $\otimes \otimes \otimes \otimes$ |
| closed and 31/32 | $\otimes \otimes \otimes$ |

## CONTROL UNIT RESET

To remove lid, use small screwdriver in the lid recess as shown and prise gently upwards.

Manual Reset

Circuit X1/X2 requires a
momentary N/O button to
Circuit X1/X2 requires a
momentary N/O button to initialise reset.
Internal switch is set to the LOWER position .

Automatic Reset

Internal switch is set to the UPPER position

Circuit X1/X2 requires a link. NOTE: Closed contacts on K3 \& K4 can still be monitored

## SAFETY SWITCHES

Mounting the Safety Switches

Do not use safety switches as a stop. 1 mm separation when closed provides the best results.

Minimum separation 50 mm between adjacent switches.

DO NOT mount on hinged side of the guard.

EN1088:
Hide the actuator where possible.

HED

## Operation

The HE Safety switches are extremely versatile and can approach each other from any angle without false tripping.
When the guard is closed the targets on the printed face of the switch and actuator must be aligned.

## Maintenance

It is recommended to check the safe operation of the of the switches and look for signs of damage or excessive wear on a weekly basis. Damaged units should be replaced or returned to the manufacturer for repair where practical.

## Notes

In the interest of product development specifications are subject to change without notice.

It is the responsibility of the user to ensure compliance with any acts or by-laws in place.

All information regarding Mechan equipment is believed to be accurate at the time of printing. Responsibility cannot be accepted for errors or omissions.
