Three housing lines: The big diversity at market

- * Approvals pending
- ** Short-circuit-based mats
- Ⓐ Suitable up to risk category max. 4

First safety relay in the world which is developed after ErP-Guidelines: The SAFE 4 eco Series

version 2014 / 15

About riese electronic:

ries.e electronic gmbh has been founded in 1958. There are working more than 100 employees in Horb a.N. (Baden-Württemberg – head office) and Langenwolschendorf (Thuringia - branch).

The divisions consist of the development, production and the Sale of the following product lines:

- safety relays (since 1990)
- time-, control- and measuring relays
- customized development and production of electronic devices and complete products which carry the label/logo of the customer.

Company history:

- 1958: foundation of ries.e electronic, division of electronic manufacturing services (EMS)
- 1961: formation of the first freely programmable punching machine of the world
- 1964: controller for the first electronic ticket machine of the world
- 1979: award from the manager magazine and the Deutsche Bank:
"the best innovative middle class company in the year 1979"
- 1984: former beginning in the SMT Production technology
- 1987: former beginning of the mass production and of relays
- 1990: First safety relays
- 1991: dedication of the subsidiary plant in Zeulenroda-Triebes (Thuringia)
- 1998: development and at least production of the worldwide smallest safety relays (SAFE 1, SAFE 2, etc.)
- 2000: smallest two hand control relay in the world (SAFE Z)
- 2001: realisation and transformation of the largest outsourcing project with more than 300 devices and 3500 components and assemblies
- 2003: expansion of production, administration and training classroom
- 2005: expansion of the sales department and warehouse
- 2006: adjustment of the business in two divisions:
 1. EMS (Electronic Manufacturing Service) and
 2. Automation & Safety
(Components for automation and safety technology)
- 2008: New building in Langenwolschendorf / Thuringia
- 2010: BEUS: First ultrasonic concrete freezing time measuring device
3. place EEEfCOM innovation award
- 2011: 1. place BACO "Best PERFORMANCE Award"
2. place „BEST EMS Award"
- 2012: SAFE 4 ECO: First safety relay in the world which is developed according to ErP-Guidelines
- 2013: BEUS laboratory version available

Since 1995 the quality management system of ries.e electronic gmbh has been certificated according to ISO 9001. Thus a continuous quality of the products and the services is guaranteed. ries.e electronic gmbh is one of the pioneers at the safety relay market!

ries.e – safety relays

With a wide product range (currently approx. 40 products) you are on the "safe side" with the newest safety technology from the descendants of "Adam Riese". Detailed technical datas as well as application examples with detailing of safety categories for safety control devices and muting controller can be found in our application guide. This application guide contains approx. 139 pages with more than 181 different application examples, descriptions and explanations of the most important standards in the safety engineering.

Please ask for our application guide on CD-ROM:

Phone: 0049 / (0)7451 5501-18 // Fax: 0049 / (0)7451 5501-70

or write us an e-mail to relay@ries.e-electronic.de.

All operating instructions will be found under www.automation-safety.com

Your personal brandlabel relay

Do You would like to have your own label on the safety relay you are using?

Do You have certain housing forms which you would like to apply?

We can offer to you is a longterm experience due to our customized division.

Thus we are able to meet your needs flexibly at any time.

Whether there should be "only" your logo on the relay or also a special colour is demanded we will together work out a complete Brandlabel project plan on which end there is your specific safety relay - fast and with competence.

choose your individual
housing ...

cage clamps, screw clamps,
detachable or fixed?

would you like
a special colour?

Your relay design department

Our large relay design team of hard- and software engineers realize your wishes for new relays.

Please ask us for your requirements.

Customized housings:

Housing IP 67 applicable to Your relay – please ask for it!

* Approvals pending

*2 Undelayed terminals only

*3 According up to safety category 3 with two-phase off-switching of power supply and protected wiring

*4 Useable only with safety light barriers with integrated selftest

Ⓐ Suitable up to risk category max. 4

√ - suitable up to risk category

x - available

NO - Normally open contact

NC - Normally closed contact

W - Change over contact

Emergency stop and safety gate monitoring relays

SAFE 4 / SAFE 4.1

Emergency stop
and safety gate monitoring relay

CE, TÜV, UL, C-UL

3 normally open safety, 1 normally auxiliary closed

LED indicators for status and supply diagnostic

Opposite polarity between channels

With (SAFE 4) and without (SAFE 4.1) start control

Power, channel 1 and channel 2

24 V AC / DC (electronic fuse)

110, 230 V AC (with galvanic disconnection / transformer)

24 V AC: ca. 5 VA, 24 V DC: 3 W, 110 / 230 V AC: 3,7 VA

<50 ms / <30 ms (24 V AC <50 ms) ready after time delay <0,5 s

5 A, 240 V AC, 24 V AC / DC, AC15 230 V / 5 A, DC13 24 V / 5 A

6 mA

-25°C to + 55°C

1200 VA (resistive load)

6,3 A quick acting or 4 A time lag

A supply voltage must be applied to terminals A1 and A2. The power LED illuminates and 24 V DC is available at terminal S11. Terminals S12 and S22 must be connected according to the application example selected to meet the application requirements. To start the unit terminals S33 and S34 must be bridged with a normally open contact. The unit works if you close this contact. At this time the contacts 13-14, 23-24 and 33-34 are closed. The LEDs channel 1 and channel 2 illuminate. In series to this start button an external contactor can be controlled.

For version with detachable clamps (screw - or cage clamps) ...
please ask our sales team!

SAFE 4 eco / SAFE 4.1 eco

Emergency stop and safety gate monitoring relay
pin and function compatible to Safe 4/4.1

CE, TÜV, UL, C-UL

3 normally open safety, 1 normally auxiliary closed

LED indicators for status and supply diagnostic

Opposite polarity between channels

With (SAFE 4 eco) and without (SAFE 4.1 eco) start control

Power, channel 1 and channel 2

24 V AC / DC (electronic fuse)

115, 230 V AC (with galvanic disconnection / transformer)

24 V DC: 1,5 W / AC: 3,6 VA

200 ms / <10 ms ready after time delay <0,5 s

5 A, 240 V AC, 24 V AC / DC

10 mA

-25°C to + 55°C

1200 VA (resistive load)

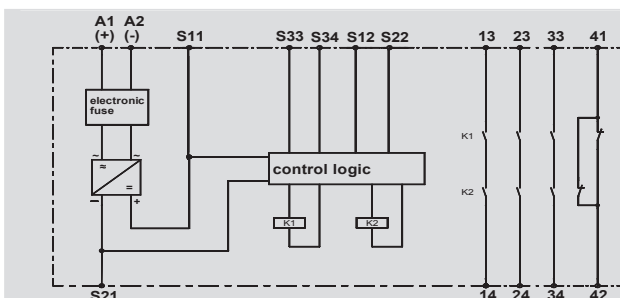

6,3 A quick acting or 4 A time lag

A supply voltage must be applied at terminals A1 and A2. The power LED lights. Terminals S11, S12, S21 and S22 have to be wired up as shown in the application examples. To start the unit, follow the examples described in the start applications section. In series to the start-button an external contactor can be controlled (see application example). After activation the contacts 13-14, 23-24 and 33-34 are closed, contact 41-42 is opened. The LEDs channel 1 and channel 2 are lit.

For version with detachable clamps (screw - or cage clamps) ...
please ask our sales team!

Dual channel safety gate monitoring with cross circuit monitoring and monitored start button

EN ISO 13849-1: PLe, Cat. 4
MTTFd: 154 years / high, DC: 99% / high,
CCF: achieved

EN ISO 13849-1 / DIN EN 61508 / DIN EN 62061: PLe, Cat. 4 / SIL3
MTTFd: 910 years / high, DC: 99% / high, CCF: achieved,
PFH: $2,32 \cdot 10^{-9} \text{ 1/h}$, SFF: > 99%, HFT: 1

SAFE 4.2 eco

Emergency stop
and safety gate monitoring relay

CE, TÜV, UL, C-UL

3 normally open safety, 1 normally auxiliary closed

LED indicators for status and supply diagnostic

Opposite polarity between channels

With and without start control (selectable)

Power, channel 1 and channel 2

24 V AC / DC (electronic fuse)

115, 230 V AC (with galvanic disconnection / transformer)

24 V DC: 1,5 W / AC: 3,6 VA

200 ms / <10 ms ready after time delay <0,5 s

5 A, 240 V AC, 24 V AC / DC

10 mA

-25°C to + 55°C

1200 VA (resistive load)

6,3 A quick acting or 4 A time lag

A supply voltage must be applied at terminals A1 and A2. The power LED lights. Terminals S11, S12, S21 and S22 have to be wired up as shown in the application examples. To start the unit, follow the examples described in the start applications section. In series to the start-button an external contactor can be controlled (see application example). After activation the contacts 13-14, 23-24 and 33-34 are closed, contact 41-42 is opened. The LEDs channel 1 and channel 2 are lit.

For version with detachable clamps (screw - or cage clamps) ...
please ask our sales team!

Dual channel e-stop monitoring with cross circuit monitoring and monitored start button.

SAFE 4.3 eco

Safety gate monitoring relay, Safety magnetic switch monitoring,
Suitable for release button with reed contact outputs

CE, TÜV, UL, C-UL

3 normally open safety, 1 normally auxiliary closed

LED indicators for status and supply diagnostic

Opposite polarity between channels

With and without start control (selectable)

Power, channel 1 and channel 2

24 V AC / DC (electronic fuse)

115, 230 V AC (with galvanic disconnection / transformer)

24 V DC: 1,5 W / AC: 3,6 VA

200 ms / <10 ms ready after time delay <0,5 s

5 A, 240 V AC, 24 V AC / DC

10 mA

-25°C to + 55°C

1200 VA (resistive load)

6,3 A quick acting or 4 A time lag

A supply voltage must be applied at terminals A1 and A2. The power LED lights. Terminals S11, S12, S21 and S22 have to be wired up as shown in the application examples. To start the unit, follow the examples described in the start applications section. In series to the start-button an external contactor can be controlled (see application example). After activation the contacts 13-14, 23-24 and 33-34 are closed, contact 41-42 is opened. The LEDs channel 1 and channel 2 are lit.

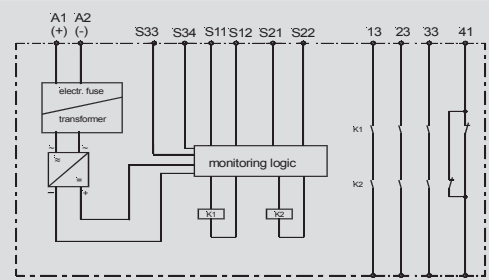

For version with detachable clamps (screw - or cage clamps) ...

Safety gate with monitored start button and antivalent switching safety gate contacts.

EN ISO 13849-1 / DIN EN 61508 / DIN EN 62061: PLe, Cat. 4 / SIL3
MTTFd: 910 years / high, DC: 99% / high, CCF: achieved,
PFH: $2,32 \cdot 10^{-9} 1/h$, SFF: > 99%, HFT: 1

EN ISO 13849-1 / DIN EN 61508 / DIN EN 62061: PLe, Cat. 4 / SIL3
MTTFd: 910 years / high, DC: 99% / high, CCF: achieved,
PFH: $2,32 \cdot 10^{-9} 1/h$, SFF: > 99%, HFT: 1

Emergency stop and safety gate monitoring relays

SAFE 5 / SAFE 5.1

Emergency stop
and safety gate monitoring relay
CE, TÜV, UL, C-UL
2 normally open safety
LED indicators for status and supply diagnostic
With (SAFE 5) and without (SAFE 5.1) start control

Power, channel 1 and channel 2
24 V AC / DC (electronic fuse)

ca. 1,6 VA / 1,6 W
<50 ms / <80 ms (AC), <50 ms (DC)
6 A, 250 V AC, 24 V DC
6 mA

-25°C to + 55°C
1500 VA (resistive load)
6,3 A quick acting or 4 A time lag

A supply voltage must be applied via emergency stop to terminals A1 and A2. Power LED illuminates if the emergency stop is closed. To start the unit terminals Y2 and Y1 must be bridged with a normally open contact. The unit works if you close this contact. At this time the contacts 13-14, 23-24 are closed. The LEDs channel 1 and channel 2 illuminate. In series to this start button an external contactor can be controlled.

For version with detachable clamps (screw - or cage clamps) ...
please ask our sales team!

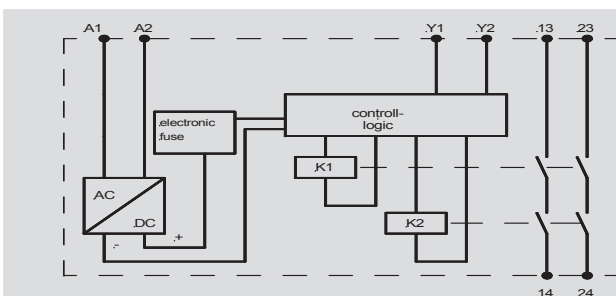

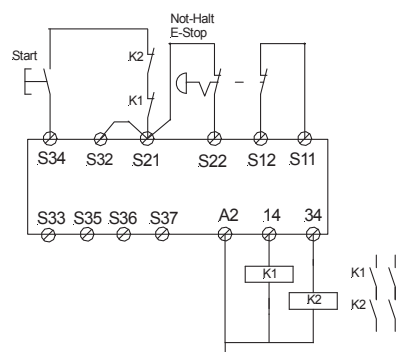

SAFE C1

Safety controller for e-stop
and gate monitoring applications
CE, TÜV, UL, C-UL
4 safety semiconductor outputs (OSSD)
LED indicators for status and supply diagnostic
Wearless semiconductor outputs, "AND", "OR" functions possible
between several SAFE C1 Automatic start possible
Power, channel 1 and channel 2 + flashing code
24 V DC (+ 25 - 20 %)
Overvoltage protection

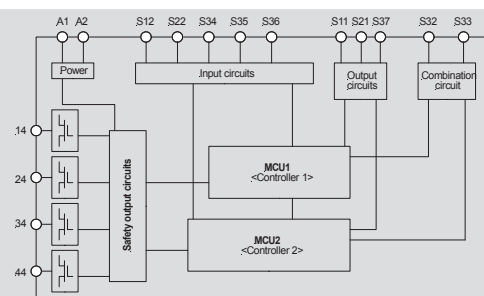

ca. 3 W
<70 ms / <30 ms
total current 1,8 A
infinite
no (special variants possible)
-25°C to + 55°C
up to 43 W
short circuit proof

2-channel e-stop application with monitoring of reset circuit, opposite channels polarity and contact expansion.
The release button must be attached to the e-stop circuits (S11 / S12, S21 / S22) and the start button must be attached to the reset-circuit (S34 / A1). The activation of the semiconductor safety outputs takes place after closing of the reset circuit (pressing the start button).
By linkage more SAFE C1 with one another safety applications also complicated, with which different components are to be differently supervised, can be realized. For monitoring of the external contactor, the NC contacts of the force guided contactors must be attached in series to the reset circuit.

A1 + 24 V DC
A2 0 V DC

EN ISO 13849-1: PLe, Cat. 3 (**see product-navigator page 4)
MTTFd: 71 years / high, DC: 90% / medium,
CCF: achieved

EN ISO 13849-1/ EN 61508: PLe, Cat. 4 / SIL3
MTTFd: 163 years / high, DC: high, CCF: achieved,
PFH: $2,87 \cdot 10^{-9} \frac{1}{h}$, PFD: $2,01 \cdot 10^{-6} \frac{1}{h}$, SFF: 0,9573

SAFE 1 / SAFE 1.1

Emergency stop
and safety gate monitoring relay
CE, TÜV, UL, C-UL
3 normally open safety, 1 normally auxiliary closed
LED indicators for status and supply diagnostic
With (SAFE 1.1) and without (SAFE 1) start control

Power, channel 1 and channel 2
24 V AC / DC (electronic fuse)

ca. 2,5 VA / 2,5 W
<50 ms / <100 ms
5 A, 250 V AC, 24 V DC
1 mA

-25°C to + 55°C
1250 VA (resistive load)
6,3 A quick acting or 4 A time lag

A supply voltage must be applied via emergency stop button to terminals A1 and A2. Power LED illuminates if the emergency stop is closed. To start the unit terminals Y2 and Y1 must be bridged with a normally open contact. The unit works if you close this contact. At this time the contacts 13-14, 23-24 and 33-34 are closed, contact 41-42 is opened. The LEDs channel 1 and channel 2 illuminate. In series to this start button an external contactor can be monitored.

SAFE 2 / SAFE 2.1

2000 VA (resistive load), 200 W

6 A quick acting or 4 A time lag

A supply voltage must be applied at terminals A1 and A2 in order to operate the device. If this is done there is a voltage of 24 V DC at terminal T11. Terminals T12 and T22 must be wired as shown in the application examples. To start the unit terminal T11 must be bridged with terminal T34 by means of a closing contact or terminal T34 must receive a 24 V DC impulse (short time bridging of the connection terminals T11-T34). If this is done contacts 13-14 and 23-24 close. The LEDs channel 1 and channel 2 illuminate. In series with the start button and terminals T11 / T34 the function of an external contactor can be monitored.

(*) We offer all devices which have a contact capacity of min. 100 mA at 24 V DC with hard gold-plated contacts. In this way you get a contact capacity of 4 mA.

A supply voltage must be applied at the terminals A1 and A2 in order to operate the device. If this is done there is a voltage of 24 V DC at the terminal T11. Terminals T12, T21, T22 and T23 have to be wired as it is shown in the application examples. To start the unit terminal T33 has to be bridged with terminal T34 or terminal T34 has to get a 24 V DC impulse (short time bridging of the connection terminals T33-T34). If this is done the safety-contacts 13-14, 23-24 and 33-34 are closed and 41-42 are open. The LEDs channel 1 and channel 2 illuminate. Through terminals X1 and X2 the function of an external contactor can be monitored. Terminals X1 and X2 have to be bridged in order to operate the device.

In use of the application below the simultaneousness of both switches is monitored (less than 0,5 s). This behaviour corresponds to EN 954-1 safety category 4.

This application is suitable for type II of DIN EN 574 and corresponds to EN 954-1 safety category 3.

Wiring changes during operation are not allowed and lead to a failure message.

Application corresponds to EN 954-1 type IIIc and safety category 4, EN IEC 62061 up to SIL3 and EN ISO 13849-1 up to PL_e.

The expansion module is used to increase the number of outputs of a safety relay according to VDE 0113. Several expansion modules can be connected to one safety relay. A supply voltage must be applied at terminals A1 and A2 in order to operate the device. If this is done there is a voltage of 24 V DC at terminal U1. Terminals K21 and K1 must be wired as shown in the application examples. To start the module, closed safety circuits from the safety relay must be connected with K21 and K1 and contacts 13-14,

23-24, 33-34, 43-44, 53-53, 63-64, 73-74 and 83-84 close. The LED's channel 1 and 2 illuminate. The stop LED illuminates if one or more safety circuits are open. The stop LED will be illuminated while the expansion module relay is operational.

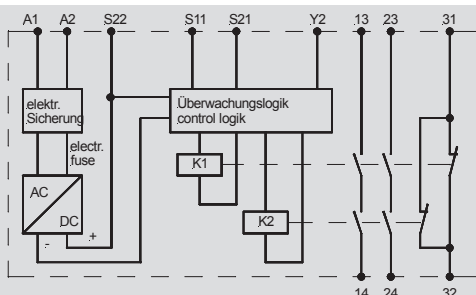

For version with detachable clamps (screw - or cage clamps) ...
please ask our sales team!

SAFE IRZ.2

Industrial relay
with positive guided contacts

CE

2 change over contacts

LED indicators for status and supply diagnostic

Initializing input

Power

24 V AC / DC

1 W, 1 VA

<25 ms

5 A, 250 V AC, 24 V DC

100 mA^(*)

-25°C to + 55°C

1250 VA

5 A quick acting

The device is an industrial relay with positive guidance for high switching cycles. The delay on and delay off times are smaller than 25 ms. After connecting the power supply on terminals A1 and A2 the relay activates immediately. If the power on terminals A1 and A2 is removed, the relay drops into the initial state.

(*) We offer all devices which have a contact capacity of min. 100 mA at 24 V DC with hard gold-plated contacts. In this way you get a contact capacity of 4 mA. If you want such a relay please write for example "AR.1632.2010 hard gold-plated contacts".

RS-NAGX 5

Expansion module
for emergency stop relay according to VDE 0113

CE, TÜV (UL, C-UL pending)

5 normally open safety and 1 normally safety closed (feedback)

LED indicators for status and supply diagnostic

Easy way to increase the number of contacts

Compact housing

Channel 1 and channel 2

24 V AC / DC (without galvanic disconnection, but with a safety resistor)

ca. 2,4 VA

<30 ms

6 A, 250 V AC, 24 V DC, sum of currents <16 A

6 mA

- 25°C to + 55 °C

1500 VA

6 A quick acting or 4 A time lag

Input circuit A1 is to be connected with one of the redundant safety outputs (13-14). Errors of the expansion unit will be announced over the feedback control loop (Y1-Y2) and the next activation will be disabled.

In case of protected wiring (short current circuit exclusion) and regularly tests, for example during maintenance, up to safety category 4.

EN ISO 13849-1: PL_e, Cat. 4
MTTFd: 74,2 years / high, DC: 99% / high,
CCF: achieved

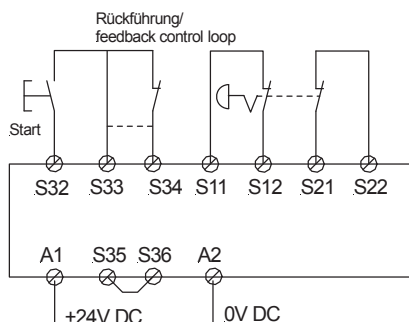

Multifunctional

SAFE FLEX

Safety controller with choosable multi functions CE, TÜV, (UL, C-UL pending) 2 normally open, 1 PNP output LED indicators for status and supply diagnostic optical failure indication by LEDs Selectable monitored or not monitored start Power, channel 1 IN / OUT, channel 2 IN / OUT, failure 24 V DC (+ 20 - 25 %) Overvoltage protection
<3 W
e-stop, BWS, Two hand, safety gate monitoring relay <= 30 ms
6 A, 250 V AC, 250 V DC
5 mA
depending on the choosen functionality (see technical data)
- 25°C to + 55°C
1500 VA
6 A quick acting or 4 A time lag

By wiring the following functionality is are choosable:

- E-Stop safety controller cat. 4
 - safety gate controller cat. 4
 - Two-Handed safety controller cat. 3c
 - ESPE safety controller (light barriers and curtains) cat. 4 and cat. 2
 - single pole safety devices with cyclic testing cat. 4
- Wiring changes during operation are not allowed and lead to a failure message.

Muting

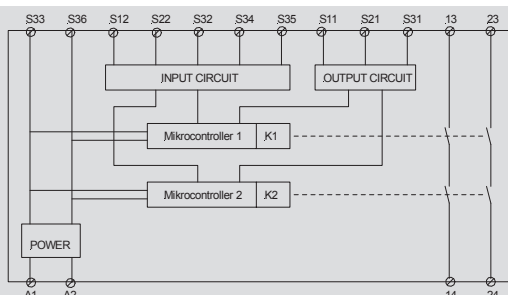

RS-NAGU.1 / RS-NAGU.2f

Muting control RS-NAGU.1: CE, TÜV, UL, C-UL, RS-NAGU.2f: CE, TÜV, UL, C-UL RS-NAGU.1: 3 electr. Safety semicond. outp. / RS-NAGU.2 f: 3 normally open 4 muting sensors connectable Control of filament of external muting lamp pushbutton Power indication, channel 1, channel 2, fault and restart interlock 24 V DC
10 W (up to 60W including peripheral devices)
RS-NAGU.1: <6 ms - RS-NAGU.2f <20 ms
RS-NAGU.1: 0,7 - 1,5 A ^(*) , 24 V DC / RS-NAGU.2f: 1,5 A, 24 V AC / DC
RS-NAGU.1: 1 mA / RS-NAGU.2f: 100 mA ^(*)
Simultaneous of the muting sensors: 3 s
- 25°C to + 55°C
NAGU.1: 17 W, NAGU.2f: 84 W
RS-NAGU.1: outputs are permanently short circuit proof
RS-NAGU.2f: 1 A quick acting or 3,15 A time lag

NAGU is used for muting of safety light barriers and safety light curtains, so that material - transport to or from a machine can be done. Applications can be found in the automotive industry, packaging machines or at highly automated production systems. The differentiation between human beings and material flow is done with up to four muting sensors or two safety light barriers. Inductive sensors or mechanical switches can also be used as muting sensors. After connection as per application guide, the device will be ready as soon as the power LED's and channel 1 and channel 2 are illuminated. If LED's channel 1 / 2 are blinking, a fault exists or a wrong connection has been made. In ready condition the RS-NAGU can be started by pushing the start key. If it cannot be started, then at least one of the muting sensors is blocked or not connected correctly. If a muting sensor is blocked by material supply, a muting can be initiated by actuation of the key switch. If the light barrier is interrupted after a muting cycle, RS-NAGU can be activated by pushing the start key after the failure has been fixed.

As soon as muting sensors 1 and 2, respectively 3 and 4 will be activated within 3 sec., the RS-NAGU will initiate a muting cycle. Muting takes place so long the inputs of both groups of muting sensors are in active state plus 0,25 s time-delay.

RS-NAGU.1: 3 electronic safety semiconductor outputs.
RS-NAGU.2f: 3 normally open safety, 3 normally open signal outputs (release, and safety light barrier)

(*) We offer all devices which have a contact capacity of min. 100 mA at 24 V DC with hard gold-plated contacts. In this way you get a contact capacity of 4 mA.

(*) 1,5 A permanent current (1 output) up to 4,5 A peak current (t<1s, UV>21,6V), 1 A permanent current (2 outputs), 0,7 A permanent current (3 outputs)

Notice: please ask for detailed documentation.

Safety standstill monitor

SAFE SM

Safety standstill monitor

CE, (TÜV, UL, C-UL pending)

2 normally open, 1 PNP output

LED indicators for status and supply diagnostic

optical failure indication by LEDs

Selectable monitored or not monitored start

Power, channel 1 IN / OUT, channel 2 IN / OUT, failure

24 V DC (+ 20 - 25 %)

Overvoltage protection

<3 W

frequency dependent

6 A, 250 V AC, 250 V DC

5 mA

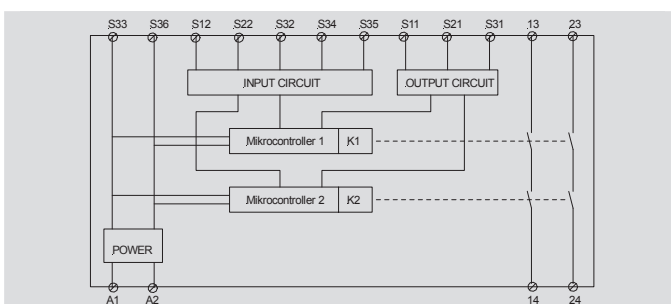

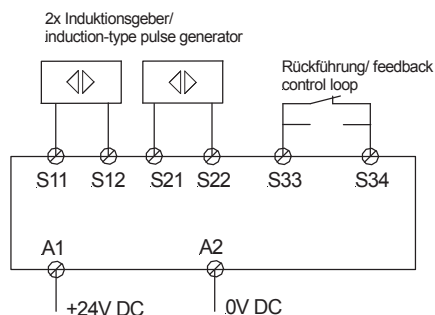

- 25°C to + 55°C

1500 VA

6 A quick acting or 4 A time lag

The SAFE SM is a safe standstill monitor. It is designed to monitor safe speeds. Digitally switches e.g. inductive sensors or ESPD's are supported. SAFE SM is a two channel device. Therefore, two digitally switches are necessary. Four safe speeds are monitored: 0.2 Hz, 0.5 Hz, 1.0 Hz and 2.0 Hz, the shifting is done via configuration wirings.

The SAFE SM monitors the speed directly on any part of the machine, means not only the motor is monitored. Even breakages are to be monitored. Rotational and translational moves are monitored as well.

Overview of the standards:

The replacement of EN 954-1

Previously, the machine constructing engineer had, according to the EN 954-1 (safety-related parts of control systems, part 1: General design principles) to proof the compliance of the general safety requirements according to the European machinery directive.

This standard demanded a risk analysis with the resulting safety categories (B, 1, 2, 3, 4). B stands for low and almost no safety respectively, 4 stands for high safety. The safety devices for a system were chosen with the safety category.

The EN 954-1 was replaced because programmable electronic systems were considered insufficiently and the time response (e.g. testing intervals, life cycles) and the failure probability of components were not considered. The following standards **EN 13849-1** (safety of machines – safety-related parts of control systems, part 1: General design principles) and **EN 62061** (safety of machines – functional safety of electrical, electronic and programmable electronic control systems) create remedy and consider the above approaches.

Definition of the safety requirements

It is divided into two parts: Safety of machines and the functional safety.

Safety of machines

After finished risk evaluation according to EN ISO 14121-1, measures for reducing of the detected risks will be defined. Afterwards, the risks will be reduced up to an acceptable residual risk.

Functional safety

The functional safety follows from the results of the machinery safety. The functional safety is divided into 6 steps:

1. Definition of the safety-technological requirements
2. Selection of the required performance
3. Safety design
4. Definition of the achieved performance
5. Verification
6. Validation

Definition of the safety-technological requirements

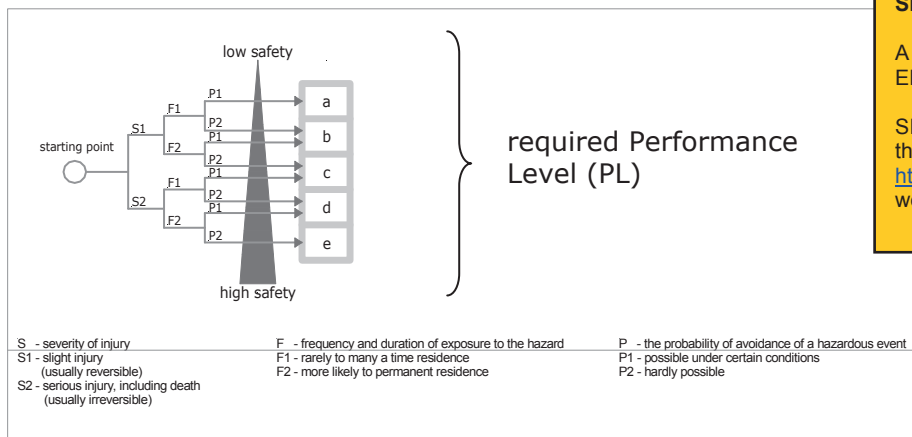

The required safety function characteristics are defined e.g. ESPD-function with automatic start, no simultaneity, etc. and a detailed description with the necessary interfaces to the other parts of control systems will be prepared.

Selection of the required performance

The definition is done with a risk graph. For new systems it can be generally done with two standards:

EN 13849-1 (Safety of machines – safety-related parts of control systems, part 1: General design principles)

With the risk graph it is possible to investigate all safety-related functions and areas of a machine respectively. The results are the so-called Performance Level / PL (**a-e**). The PL is needed for the selection of the safety setup and the corresponding components including wiring. The **a** stands for low safety and the **e** for high safety.

SISTEMA

A free tool to calculate the parameters of EN ISO13849 of a given safety chain.

SISTEMA can be downloaded from the ifa website
<http://www.dguv.de/ifa>
webcode e34183

EN 62061 (Safety of machines - functional safety of safety-related electrical, electronic and programmable electronic control systems)

With the risk graph it is possible to investigate all safety-relevant functions and areas of a machine respectively. The results are the so-called Safety Integrity Level / SIL (1 - 3). The SIL is required for the selection of the safety setup and the corresponding components including wiring. The 1 stands for low safety and the 3 for high safety.

Effect and severity	S	Frequency and duration	F	Probability	P	Avoidance	A	Class K (=F+P+A)				
								3-4	5-7	8-10	11-13	14-15
Death, losing an eye or arm	4	≤ 1 h	5	very high	5			SIL2	SIL2	SIL2	SIL3	SIL3
Permanent, losing a finger	3	> 1 h - ≤ 1 day	5	likely	4				OM	SIL1	SIL2	SIL3
Reversible, requiring attention from a medical practitioner	2	> 1 day - ≤ 2 weeks	4	possible	3	impossible	5			OM	SIL1	SIL2
Requiring first help	1	> 2 weeks - ≤ 1 year	3	rarely	2	possible	3				OM	SIL1
		> 1 year	2	negligible	1	likely	1					

OM = other measures advised

Safety design

The safety function described in step 1 is designed. The single components are defined, e.g. safety relays SAFE CL for the ESPD-function.

Definition of the achieved performance

The actual performance of the safety function is detected. The safety function is divided in sensors, logic and actuators. The parameters required to calculation are provided by the component manufactures.

Verification

For each single safety function, the in step 4 achieved performance has to be bigger or equal as the in step 2 defined required performance. If this is not the case the safety function has to be improved.

Validation

For the safety function, the validation ensures that all safety-relevant parts achieve the requirements.

► Mechanical life time	10^7 switching cycles	
► Electronical life time	10^5 switching cycles	
► Mounting	DIN rail DIN 46 277 (35 mm)	

Pay attention to housing with detachable terminal strips: if you would like to detach the terminal strips please take away the power first.

- The ground wire has to be connected to terminal PE when an auxillary voltage used (at the terminals A1 and A2) UB~ / with galvanic disconnection to connect a protective conductor. By AC / DC or DC - devices is this not permitted.

All operating instructions can be found under www.automation-safety.com

Development

Production

Special advantages

- emergency stop according to EN60204
- redundant positiv guided relay
- cyclical monitoring of the function
- housing with detachable terminal strip (for a quick change of the devices) by the NAG-line (without RS-NAGU.1 / RS-NAGU.2f)
- wireless layout
- housing of self extinguishing plastic according to UL 94-V1
- 100% computer assisted check

Infos on our business division EMS (electronic manufacturing service):

Development, production and tests for user-specific electronic devices and assemblies

www.riese-electronic.com

riesse[®]
electronic
manufacturing
service

Your EMS-provider...

...and system-supplier for electronic devices and assemblies

www.riesse-electronic.com

- ▶ Our customers are situated in the business of engineering, automation, automotive, medical technology and control devices.
- ▶ riese electronic employs 120 staff at it's two plants in Horb (Baden-Württemberg) and Langenwolschendorf (Thuringia).
- ▶ partners in Hungary and China

Further product line on our business division A+S (automation & safety) :

producer of time, measuring and safety relays, representative of automation and safety products

www.automation-safety.com

Since 1987 riese electronic has been developing, producing and testing the time-delay and measuring relays. We not just test our relay after it's finished we test it at every step of production! Our testing strategy thoroughly checks all functions of every single relay by means of a computerized testing system which we developed ourselves. We simulate situations in which the worse scenarios happen all at once. Only after such testing does a relay get the "thumbs-up". Therefore, "riese-relays" are ideally situated to rough environments, e.g. severe vibrations, temperature fluctuations or voltage discrepancies.

Special features

- ▶ **12 V relays**, e.g. for vehicles, vehicle mountings We have developed a number of relays especially for this purpose. Not all types are included in this leaflet so please call us for details.
- ▶ **24 V relays**, e.g. for railways, tram systems. Peculiar to railways and tram systems is the fact that the voltage changes depending on the number of vehicles. We have managed to overcome these and other specific problems.
- ▶ **Brand-name labeling**. Do you need relays with your company logo? No problem!
- ▶ **Special designs**. If you can't find the relay you're looking for in our range, then please contact our design department. We relish the opportunity to discover new ways of optimizing your applications.

Time-delay relays from riese

- Clock-pulsed
- Multifunction
- Interval time-delay
- Flashing
- On-delay
- Off-delay

Applications	Relay designations	Column	Category according to EN 13849-1
On-delay	RS-VR1, RS-VR2,	1	1
	RS-ZR1, RS-ZR2,	2,	1
	RS-ER1, RS-ER2,	4,	1
	RS-ERF,	4,	1
	RS-LR1, RS-LR2,	5,	1
	RS-LZ1, RS-LZ2,	6,	1
	RS-LZF	7	1
Off-delay	RS-AR1, RS-AR2,	8,	1
	RS-AZ1, RS-AZ2,	9	1
	RS-LA1, RS-LA2,	10,	1
	RS-AZS	11	1
Flashing	RS-BR1, RS-BR2,	12,	1
	RS-BRS1, RS-BRS2	13	1
Clock-pulsed	RS-TG1, RS-TG2,	14,	1
	RS-TGI1, RS-TGI2	15	1
Multifunction	RS-MF	16	1
Interval time-delay	RS-EI1, RS-EI2,	17,	1
	RS-EIF,	18,	1
	RS-WAR	19	1

Measuring relays from riese

- Voltage relays
- Industrial relay
- PTC-resistor release relays
- Level relays
- Phase relays
- Current relays

Applications	Relay designations	Column	Category according to EN 13849-1
PTC-resistor release relays	RS-TMSA, RS-TMSA-2	1	1
	RS-TMKA, RS-TMKA-2	2	1
	RS-TMSW, RS-TMSW-2	3	1
	RS-TMKW, RS-TMKW-2	4	1
	RS-TMSV, RS-TMSV-2	5	1
	RS-TMKV, RS-TMKV-2	6	1
	PTC-resistor release relay in 22.5 mm housing	8	1
	RS-TMW	7	1
Level relays	RS-NR4, RS-NRU-4	9, 10	1, 1
	RS-NR2	11	1
Current relays	RS-185-4, RS-188-4	12, 13	1, 1
	RS-187-4, RS-188-4	14, 15	1, 1
Voltage relays	RS-180-4, RS-181-4	16, 17	1, 1
	RS-182-4, RS-183-4	18, 19	1, 1
Phase relays	RS-PH1-4	20	1
Industrial relay (High frequency switching)	RS-IR2	21	1
